

TECHNICAL SUMMARY

Developer experienced in building React applications on the frontend and NestJS/GraphQL services on the backend, backed by PostgreSQL and MySQL/MongoDB. Comfortable working across the entire stack — from responsive UIs and Redux state management, to designing GraphQL APIs, structuring relational databases, and enforcing server-side authorization. Has independently built and deployed a production-style full-stack application end to end, and also works professionally alongside backend teams to ship functional web apps.

PROFESSIONAL EXPERIENCE

Tricity Services — Front End DeveloperDecember 2025 – Present

- Built responsive web applications and Single Page Applications (SPAs) using React.js and Tailwind CSS.
- Managed application state with Redux to ensure smooth data flow across components.
- Connected RESTful APIs to fetch, handle JSON data, and render dynamic content from backend services.
- Worked with the backend team to connect the frontend UI to SQL databases via APIs.
- Used Vite to set up projects and keep build performance optimized.
- Cleanly converted Figma designs into cross-browser compatible web pages.
- Kept code organized using Git/GitHub and used Chrome DevTools for debugging layouts.

TECHNICAL SKILLS

Frontend:	React, JavaScript (ES6+), TypeScript, HTML5, CSS3, Tailwind CSS, Material UI, Ant Design
State Management & Data:	Redux, Redux Toolkit, RESTful APIs, GraphQL, JSON, Axios
Backend & Databases:	Node.js, NestJS, PostgreSQL, TypeORM, MySQL, MongoDB
Tools & Platforms:	Git, GitHub, Vite, Figma, Chrome DevTools, Vercel, Render

PROJECTS

HisaabBook — Full-Stack CRM Application

hisaab-book-three.vercel.app | Frontend: github.com/aryan7061/HisaabBook | Backend: github.com/aryan7061/HisaabBook-api

- Built and deployed a full-stack CRM for managing companies, contacts, deals, and tasks, with a React/TypeScript frontend (Refine, Ant Design) and a NestJS/GraphQL backend on PostgreSQL, hosted independently on Vercel and Render.
- Implemented server-side, role-based data authorization so every user only accesses records they own or created, enforced at the API layer rather than only in the UI.
- Built a drag-and-drop Kanban board for task management using dnd-kit, with server-side pagination and filtering per column.
- Built dashboard analytics — deal pipeline value, win-rate tracking, and task-stage trends — using GraphQL aggregate queries, with Excel export and multi-currency (INR/USD) support via live exchange rates.

Prime Tube — Video Sharing Platform

- Created a responsive video streaming website using React.js where users can search and watch videos in real time.
- Set up dynamic client-side routing with React Router DOM for video details, channel profiles, and search results.
- Connected to the YouTube API via RapidAPI using Axios to load live data, with proper loading spinners and error handling.
- Built a custom dark-themed UI using Material UI and custom CSS with reusable components.

EDUCATION

Master of Computer Applications (MCA), Chandigarh University	2023 – 2025
Bachelor of Computer Applications (BCA), Chandigarh University	2020 – 2023
Senior Secondary (CBSE)	2020
Secondary (ICSE)	2017
