

SUMMARY

Full stack Developer with experience building **responsive applications** using React.js, TypeScript, JavaScript, Redux, and REST APIs. Designed, developed, and deployed **HisaabBook**, a **full stack CRM** using React, TypeScript, NestJS, GraphQL, PostgreSQL, and **server side authorization**. Experienced in API integration, handling database and collaborating on API contracts. Currently expanding full-stack development skills across MERN and Python.

PROFESSIONAL EXPERIENCE

Front End Developer — Tricity Services

Dec 2025 – Present

- Developed **3 single page applications** using React.js and Tailwind CSS, with **25+ reusable components** for consistent UI and maintainable code.
- Managed **shared application state with Redux**, coordinating API data and UI state across multiple screens.
- Integrated **30+ REST API endpoints** using Axios, implementing structured loading, error, and data handling states.
- Collaborated with backend developers to define **API request/response contracts** and connect UI workflows with PostgreSQL or MySQL backed services.
- Translated **Figma designs into cross browser interfaces** with consistent layouts, interactions, and responsive behavior.
- Debugged and resolved frontend issues, improving **application reliability**, usability, and overall user experience.
- Contributed to **full stack development** through API integration, database backed features, debugging, and application deployment.

TECHNICAL SKILLS

Backend & Databases:	Node.js, NestJS, TypeORM, PostgreSQL, MySQL, MongoDB
Frontend:	React.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Material UI, Ant Design, Refine, Responsive Design
State Management & APIs:	Redux, Redux Toolkit, REST APIs, GraphQL, Axios
Programming:	Python, Object-Oriented Programming (OOP)
Tools & Deployment:	Git, GitHub, Vite, Figma, Chrome DevTools, Vercel, Render, Kaggle

PROJECTS

HisaabBook — Full-Stack CRM Application | React, TypeScript, NestJS, GraphQL, PostgreSQL

hisaab-book-three.vercel.app | Frontend: github.com/aryan7061/HisaabBook | API: github.com/aryan7061/HisaabBook-api

- Designed, built and deployed a CRM for companies, contacts, deals and tasks as a solo project: React 19 + TypeScript frontend (Refine, Ant Design) on Vercel and a NestJS + GraphQL API on Render, with route level code splitting and a one click demo login.
- Modeled **7 relational PostgreSQL entities** with TypeORM and versioned migrations. Exposed GraphQL CRUD with pagination, filtering, sorting and aggregate queries, and used **DataLoader to prevent N+1 queries**.
- Implemented **JWT authentication** (bcrypt hashed passwords) and **role based access control for 4 roles**, enforced on the server so users can't reach other users' records by editing GraphQL queries from the client.
- Built **17 routed pages**, including a **drag and drop Kanban board** (dnd-kit) with server side pagination per column, and **analytics dashboards** (pipeline value, win rate, task-stage trends) with Excel export and live INR/USD conversion.

Prime Tube — Video Sharing Platform | React.js, React Router, Material UI, Axios

- Created a responsive video streaming website using React.js where users can **search and watch videos in real time**.
- Set up dynamic client side routing with React Router DOM for video details, channel profiles, and search results.
- Connected to the **YouTube API** via RapidAPI using Axios to load live data, with proper loading spinners and error handling.
- Built a custom dark themed UI using Material UI and custom CSS with reusable components.

EDUCATION

Master of Computer Applications (MCA) - Chandigarh University

2023 – 2025

Bachelor of Computer Applications (BCA) - Chandigarh University

2020 – 2023
